Subject: Re: '9 Plant Forests and Make a Fortune.' cont'd.

Dear Friends, what they say is the reality, the Amazon is drying, and wildlife is extinguished every time more, all displayed in zoos and greenhouse in free nature continues to disappear.

I did some research on ecosystem restoration in areas destroyed, all this comprehensive: Forestry, biological and cultural, the results are very valuable, I am now working with an Indigenous community and more projects in 7 hectars, reaching more than 120 species of birds, many animals, and a very large biological restoration; we have over 250 species of spiders and hundreds of insects, 60 species of frogs, etc... When we started in 1980, only had, eroded land, grazing cows, and grasshoppers as pests, now is a valuable ecosystem, **but I have no money to go further**, but I do what I can and have the creation model ecosystems single most important. Possible restoration of flora and wildlife free.

Puyo-Pastaza, Ecuador

Best Regards

Omar Tello

Thank you for getting in touch. It's good to hear from someone who's working on the ground. The highlighted bit only demonstrates further precisely the point I've been trying to push forward. Forestry projects not only can but must be earning their keep. Gaining money from native rubber or cocoa etc., to pay for projects such as the ones you are working on. Only with money coming in would be possible to buy up more and more land for future new projects.

Subject: FW: Enough is enough

It is now over five years since the Woodlane wind farm fight began. In that 5 years there has been a big increase in opposition, matched by a shift in public opinion and in planning policy. Each new wind farm creates new problems and new victims and from this a wider appreciation of the problems created. The response to each new wind farm proposal is the immediate formation of an action group.

The collective strength of over 400 action groups in the UK is enormous, they have succeeded in getting wind farms recognised as a major threat in rural constituencies, and in getting Government policies changed via their MP's. Some of these MPs including David Davis have appeared as witnesses at planning enquiries. They understand how the wind industry operates and how much misery the prospect of the wind farm brings to nearby villages. In Selby and Ainsty we must thank Nigel Adams for his unstinting opposition to wind farms and large single turbines – which has been a major factor in getting many of them refused.

Now is the time to move things on to the next stage. There have already been a number of Ministerial statements that make it clear that local views are an important consideration, that the need for renewable energy does not trump local landscapes, and that we need better protection for our heritage assets. Recently we have seen appeal decisions called in by Eric Pickles who has taken the final decision, sometimes refusing them when an inspector has recommended approval. A new word has been created to describe this – Pickled.

The process and the results at two wind farm appeals are fully explained here – the page includes a video interview with David Davis MP.

In spite of this wind farm and wind turbine applications continue – around Selby there is just one wind farm so far but with approved wind farms, appeals pending and other applications at various stages it could be 6 or more wind farms with over 50 industrial turbines. In addition there have been over 40 applications for single turbines up to 90 metres high, just short of a cooling tower.

Enough is enough – and we need to demonstrate the strength of feeling against the proliferation of turbines across our countryside. Over in East Yorkshire the situation is even worse and we will hear details about what could be coming our way if do not continue to fight proposals in Selby District.

I know that it is short notice but it would be really good if we could put up a good showing in Beverley this coming Saturday – this is a well organised march with road closure for the event, speakers include David Davis. There is easy parking and a walk of just over a mile into Beverley.

This is a major event and it is very important that we show that we care – the media will be there and we need to make sure they see that wind turbines are big news and that the strong opposition from the normally silent majority. Enough is enough and we need to make it clear that we want our countryside protected from the proliferation of onshore turbines.

Howard Ferguson

Subject: Recklessly killing wolves, and proud of it

A huge number of top predators – including hundreds of wolves – die each year at the hands of Wildlife Services.

Help us hold these trained killers accountable. Government Wolf Killing Agency is killing more than 500 wolves in one year alone, it's time Wildlife Services is held accountable.

Hold the federal predator exterminators accountable for their actions!

The agency is called “Wildlife Services.” It's about the worst possible name you could imagine for an agency that kills a huge number of animals each year, including wolves, bobcats, mountain lions and coyotes.

Every day, more questions come up about this federal agency's lethal actions against predators. But instead of being embarrassed by their reckless unjustified killing of wolves and other predators, the Administrator overseeing this agency has publicly proclaimed that he is proud of the lethal work the agency does!

Their track record on wolves is a particularly bloody one. From the agency's own records, an accounting of more than 500 wolves killed in one year alone reads like something from a bad horror movie:

- 64 wolves gunned down from helicopters
- 316 killed in foothold traps
- 30 killed using neck snares
- 37 shot from fixed wing aircraft

It gets worse. Last winter, Wildlife Services, hired by the Idaho Department of Fish and Game, went into a federally designated national forest to shoot 23 wolves ... and their excuse was to artificially boost elk populations for big game hunters.

If there are special areas on federal lands where wolves should be safe, it should be in congressionally designated national forest - but for the hired guns from Wildlife Services, it meant nothing.

The agency should be ashamed and held accountable. Will you help us stop the killing today?

A major investigation by reporters at the Sacramento Bee newspaper concluded that the agency's killing habits are "indiscriminate, at odds with science, inhumane and sometimes illegal."

Sincerely,

Jamie Rappaport Clark

Subject: Monsanto vs. monarch butterflies (and Monsanto is winning)

Got Milkweed? Probably not...

Weed killers like Monsanto's Roundup herbicide is killing the majestic monarch butterflies by wiping out up to 80% of the milkweed in the Midwest.

Now these precious pollinators are in crisis!

Ask the USDA and EPA to revisit the safety of GMO crops and the herbicides that accompany them before more damage is done.

Monarch butterflies need milkweed. It is the only plant they can lay their eggs on and that the caterpillars can eat.

But the combination of genetically engineered corn and soy and weed killers like Monsanto's Roundup herbicide has wiped out nearly all the milkweed that used to grow along the monarchs' migratory routes, leaving the butterflies nowhere to lay their eggs

Now monarch butterflies are in crisis and unless we act quickly, they may disappear. Soon! Tell the USDA and the EPA to to adopt tough restrictions on pesticide-resistant crops and the toxic herbicides responsible for the rapid disappearance of monarchs.

Every fall, for the last umpteen thousand years, hundreds of millions of beautiful orange and black monarch butterflies have taken to the skies, flying more than 2,500 miles across Canada and the U.S. to reach their winter home in the thick forests of tall oyamel fir trees that grow in Mexico's Sierra Madre mountains.

This winter, only 33.5 million butterflies made it to Mexico – the lowest level ever reported. Like honey bees and other pollinators, monarch butterflies are now in crisis, with populations plummeting dramatically since the introduction of herbicide-ready corn and soybean crops in 1997.

The huge increase in the usage of GMO crops and the toxic herbicides like Monsanto's Roundup that accompany them is a major culprit for the monarch's disappearance, along with rapid deforestation in Mexico and extreme weather caused by climate chaos.

The world needs monarch butterflies. But they can't survive without milkweed. And milkweed can't survive weed killing chemicals...

Please join us and our coalition partners, NRDC and Friends of the Earth, in speaking out to try to save monarchs. Ask the EPA and the USDA to revisit the safety of toxic herbicides and to stop approving more of these dangerous chemicals.

Monarchs and bees are crucial members of our ecosystem. If we do not stand up now to demand that their continued existence take priority over profit margins, they will go away. Forever.

Please don't wait – send your message now.

Thank you again for speaking up to protect these beautiful creatures and for all you do.

Best,

Kevin Curtis

Subject: Monsanto is the Devil

Reverend Billy & the Stop Shopping Choir

We live in a showdown. This is the 6th Great Extinction of life on Earth. Let's take our show on the road. Let's go to Monsanto headquarters in St. Louis!

To make a hot show, pick a very dark Devil and a magical Hero. Our Devil is Monsanto and our Hero is the Honey Bee.

You are aware that right now the bees are half gone. The neuropathic pesticides called "neonicotinoids" short-circuit the bees' navigation. They can't find their home hive, flying laden with flower pollen, lost.

MAKE A DONATION TO FUND OUR GREAT SWARM AT MONSANTO HEADQUARTERS IN ST. LOUIS.

The Honey Bee is our teacher. We learn to swarm and sting. We travel long distances to our sweet destination. We cover ourselves with bees. We brush wild honey on ourselves and stick to Monsanto's walls.

Will you please make a small or large contribution? Help us travel with our singers, eight hundred Honey Bee dolls, and lots of jars of honey.

The Honey Bee instructs us to be outlandish enough to resist labels, like "lefty" and "protester." Just start the show, the bees buzz...

Be so dramatic that people shout "How will the bees get back to their hive?" and "How will we survive?"

HoneyBeeLujah!

Reverend Billy Talen
